

eVolve Panton

Green Mountain Power and Efficiency Vermont are partnering on a community-wide rapid energy transformation project in Panton. This project will accomplish several things, including measuring Panton's current total energy use, cost and carbon impact, and then developing programs to reduce energy costs for homeowners and businesses, lower overall fossil fuel use, and improve homeowner comfort. The goal of eVolve Panton is to show what rapid, positive impacts are possible when communities and energy providers work together to create a new energy future one town at a time.

What will we do?

Over the course of twelve months, Green Mountain Power and Efficiency Vermont will provide technical assistance, financial incentives, and turn-key financing to spur a dramatic and comprehensive energy transformation in Panton, including:

- Assess total energy use, cost and carbon, and use the data to track improvements in Panton
- Deep energy retrofits for homes and buildings
- Addition of efficient heating and cooling systems, like cold climate heat pumps
- Use of innovative technologies like battery storage
- Installation of renewable energy generation
- Adoption of efficient transportation solutions

Sign up!

Get involved – it's simple! Over the next few months, we will be in Panton conducting home energy visits to measure the total Panton energy baseline on usage, cost and carbon. From these home energy visits we will also identify possible energy improvements for each Pantonian and work with local contractors to install recommended measures under unique financing programs. What will we achieve together? We will accomplish a level of energy transformation in 12 months that might otherwise take 20+ years on its own. Panton residents will enjoy cleaner, more reliable, and affordable energy – plus a stronger bond forged through their collective action while leading Vermont by example.
